

## 5866 GC kinematics - Preliminary Results

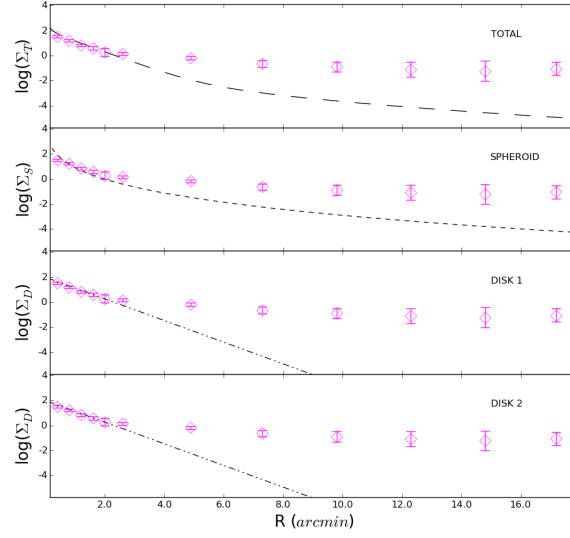

Figure 1: GC number density, from ?, versus light profiles following GALFIT analysis. We found NGC 5866 to be well-fitted when considering two disk components. Nevertheless, there's a clear mismatch between GC number density and the light profiles after 5Kpc.

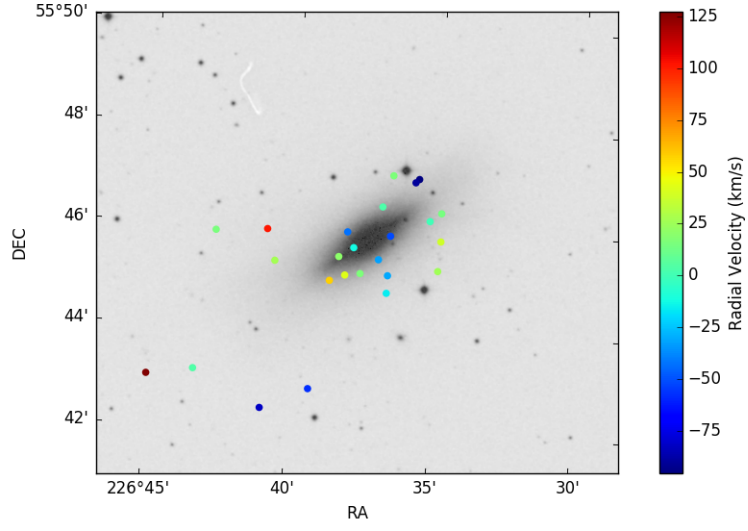

Figure 2: Velocity map for spectroscopic GCs from SLUGGS, after smoothing using Adaptive Kernel Smoothing (AKS) (?).
